

Power ETF Report

Our research revealed 4 Power *Index* ETF's that returned on average over 100% per year using simple Active Trend Trading System technical entries.

Power ETF's				
Year	TNA	FAS	TQQQ	UPRO
2009	298%	113%	--	69%
2010	179%	188%	157%	136%
2011	141%	176%	139%	116%
2012	145%	86%	82%	76%
2013	163%	159%	119%	108%
Average	185%	144%	124%	101%

The table shows the yearly return and average return for the past 5 years if a trader only captures 50% of the measured moves for each ETF.

Each of these ETF's provided clues on when to get in and when to get out of trades that would capture a significant amount of the total price move. If you would like to learn how to trade these clues become an Active Trend Trader. We specialize on helping traders learn and use the clues. Visit us at: <http://activetrendtrading.com/>

Each of these leveraged Index ETF's were designed to move 3 times the daily move of the underlying Index. **They were not designed for long term buy & hold strategies but were designed for holding periods of a few days to several weeks!** These results were achieved following a simple trend trading system requiring 4-8 trades per year.
