Multiply Returns With No Extra Work

Presented by

ACTIVE TREND TRADING

Clarify. Simplify. Multiply.

THE PROBLEM WITH AVERAGE

Since 1993, ETFs have provided an alternative to mutual funds and stocks. At first they focused on imitating indices, like the S&P 500.

Everyone has heard of, and probably traded the SPY. It's a simple way to keep your account on track with the benchmarks and gain your "10% yearly average". Almost.

The fees are small, but they still chip away at the average returns on ETFs like SPY.

But keeping track with the market can still be a wild ride! It was only 10 years ago that the S&P 500 lost 37% in a single year.

Buy and Hold investing is playing for average. And for a lot of people, the chances that they hit one of the big dips during their planned retirement year is scary.

Read on to get some simple ways that you can take control and rev up your returns with little or no extra work managing your investments.

7%

The historical average annual return of the S&P 500, adjusted for inflation.

30.6%

The 7 year average performance for Active Trend Trading as of 11/21/2018

SECRET 1: LEVERAGE

Not many average investors have heard about it, but starting in 2006, Wall Street started releasing leveraged ETFs. These ETFs trade just like the ones you're familiar with (SPY, QQQQ), but their aim is to move 2x or 3x the daily return of the entity they're following.

For example, UPRO is a 3x leveraged ETF that tracks the S&P500. If the S&P is up 1% for the day, the managers of UPRO try to use leverage and derivatives to hit 3%. See the chart on the next page.

THE DOUBLE EDGED SWORD

So you can buy UPRO and triple your average returns compared to SPY, right? Hold on a second.

Leverage is an awesome tool for boosting returns. But remember, if the S&P drops 1%, UPRO will be down 3% that day. The roller coaster gets more extreme.

You can win fast, but you can also lose fast.

Also, because the managers are using specialty products to multiply the daily return, they have to rebalance their fund on a regular basis.

This can lead to some leveraged ETFs drifting apart from their tracking entity, a condition called contango. This is often most visible if the market goes sideways. The leveraged ETF may lose value as the underlying holds.

The leveraged ETFs weren't designed for long-term buy and hold strategies. Check out Secret 2 below to see how two simple strategies help you to ride the waves to beat the averages.

Chart 1: UPRO candles almost perfectly track the S&P line from Aug-Nov 2018. See that on the last day, 11/28/18, the S&P was up 2.3%, while UPRO gained 6.84%, almost exactly 3x.

SECRET 2: YOU CAN WIELD THE LEVERAGE SWORD

HACK 1: SEASONALITY

Stocks move in patterns. Largely because people are habitual creatures. Sayings like "Sell in May and go away" became sayings because traders noticed that pattern. Using tools like EquityClock.com to study the typical yearly patterns can help us to find the opportune times to be watching for prime trade opportunities.

Combined with UPRO, that common Santa Claus rally from Oct-Dec. turns the typical 5-6% into 15-18%...if you can catch it.

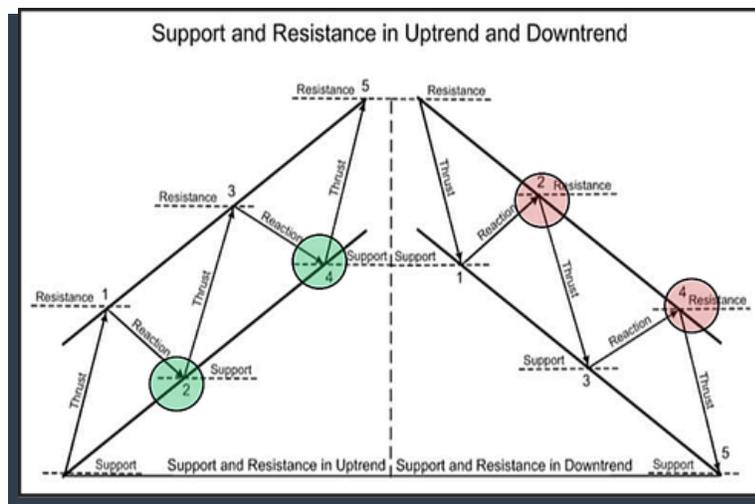

Conventional wisdom says you can't time the market. But there are thousands of people who do it year in and year out. Think of them like surfers who time sets of waves.

There are simple technical patterns that repeat on stock charts with outcomes that become predictable with enough repetitions. Reading those patterns is the basis of technical analysis.

To the right, you can see a representation of common price movement during trends.

If you learn the clues that alert you to the green buy areas and the red sell areas, you're on your way to taming the roller coaster. And if you can do that, you can safely wield leverage for your benefit. See the following page for more detail.

HACK 2: TECHNICALS

EXAMPLE: BE A BULL RIDER

LABU (below) is the 3x leveraged ETF that follows the S&P Biotechnology Select Industry Index. Like the major indices, Biotech has seasonal swings.

The industry tends to move higher around mid Dec-early Jan, then early to mid June, and again in October. It doesn't happen every time, but it's regular enough to profit from.

This chart shows how just a few seasonal and technical signals led to impressive opportunities from about Sep 2016-Sep 2018.

Active Trend Trading teaches busy people like you, how to spot the simple seasonal and technical clues that open up opportunities like those shown below.

We also monitor our watch list and send trade alerts to subscribers when we see a good signal.

Nobody can catch all of every move, but even pulling 1/3 from the middle would help most traders to do better than their managers and build wealth.

AN OUNCE OF PREVENTION

Because of the inherent volatility of leveraged ETFs, it's necessary to practice strong discipline with position sizing, mechanical stops, and trade management.

Technical Analysis and Seasonality can also help us to exit trades with consistent profits, rather than riding the cycles of thrust and reaction.

As we said, it's possible to wield the double edged sword of leverage, and to time markets effectively, but if you can't exercise self control when it comes to following a system, please stay away from leveraged ETFs.

If you want to learn control, we can help. Read through for a special offer at the end of this report.

Active Trend Trading teaches premium members 5 simple and objective ways that you can choose to lock in profits and get ready for the next opportunity.

Could you pick at least two of them out from the chart of LABU?

*Next up,
Secret 3: The Magnificent 7 ETFs*

SECRET 3: STICK WITH THE MAGNIFICENT 7 ETFs

**Chasing fad stocks is a losing strategy.
You win when you limit your watch list.**

You might get some office admiration by saying you own "The Next Facebook" or Tesla, or Microsoft. Yawn.

The list goes on. Filtering out the gems from the noise is a waste of time.

We'll admit, it's exciting when you get those 50-100% returns on a single trade. But that's never guaranteed. And the Magnificent 7 ETFs provide that opportunity with more regularity than most stocks.

Sexy doesn't pay the bills. Consistency does. And the best way to get consistent is to be clear on your objectives, use a short watch list, and a simple trading system.

You want stocks that move regularly and in clear patterns. That's how you use the techniques in Secret 2 to bag five trades of over 50% in two years on LABU and others.

Our Magnificent 7 stable of leveraged ETFs (see right) gives you broad market exposure, multiple trading options per year (but not so many you can't trade alongside your real job), and strong moves to help grow your accounts. And with less effort compared to stock picking.

The Mag 7

Index Trackers

S&P 500: UPRO

Nasdaq 100: TQQQ

Rusell 2000: TNA

Sectors

Biotech: LABU

Financial: FAS

Commodities

Oil: UCO

Gold Miners: NUGT

These 7 ETFs will provide more than enough trading opportunities and profit potential to blow away the averages.

CONCLUSION

You Can Do Better Than Average

1

Leveraged ETFs allow us to earn better returns than the averages with the convenience of ETFs.

2

You can safely wield the sword of leverage with simple supporting tools like seasonality and technical chart patterns.

3

Keeping a short watch list that has trophy-level returns and clear patterns like our Magnificent 7 ETFs keeps your life simple and multiplies profits.

ABOUT ACTIVE TREND TRADING

A Training and Timing Service Based on 3 words: Clarify. Simplify. Multiply.

Active Trend Trading began with the premise that typical training for traders was too complex. We asked what was essential for a profitable system, and cut all the fluff. That drove us to our motto: Clarify. Simplify. Multiply.

Join us to learn how you can do the same. We've been training busy people how to trade profitably since 2010. You can be a consistently profitable trader and take control of your investments.

Happy Trading and God Bless,
Dennis Wilborn

1

When you Clarify your system, you remove confusion.

2

When you Simplify your system, you create focus.

3

Then you're free to Multiply your profits.
